SUMMARY

Final-year Computer Science student focused on machine learning and backend engineering. Comfortable taking a model from a notebook to a deployed API.

EDUCATION

B.Tech, Computer Science and Engineering — National Institute of Technology

2022 – 2026 | CGPA: 8.6/10

TECHNICAL SKILLS

Languages: Python, C++, SQL

Machine Learning: scikit-learn, PyTorch, pandas, NumPy

Backend: FastAPI, REST APIs

Tools: Git, Linux, Jupyter

EXPERIENCE

Machine Learning Intern — Fintech Startup (Summer 2025)

- Built a credit-risk classification model in scikit-learn, improving recall on the minority class through resampling and threshold tuning.
- Exposed the model behind a FastAPI service consumed by the web team.

PROJECTS

Resume-to-Job Matcher

- Built an NLP pipeline that extracts skills from resumes and scores them against job descriptions using TF-IDF and cosine similarity.

Handwritten Digit Classifier

- Trained a convolutional neural network in PyTorch on MNIST, reaching ~99% test accuracy.

CERTIFICATIONS

Machine Learning Specialization — Coursera

ACHIEVEMENTS

Finalist, inter-college hackathon (2024).
